

## Acknowledgements

This culmination of this project, the University of Michigan Hospitals and Health Centers Department of Pathology Health and Safety Manual, is the product of numerous hours of hard work and dedication by the departmental Safety Committee. Their astute attention to detail in the recognition of safe work practices and work hazards is proof of their commitment to assuring a safe laboratory working environment for all employees. This commitment does not go unrecognized by institutional and departmental leadership and everyone is commended for their efforts.

As referenced in the Forward to this manual, Department of Pathology leadership is supportive and fully committed of all efforts in providing a safe working environment. The Safety Committee would like to personally thank them for their support.

A special word of recognition is expressed to the Department of Pathology web design team of Laura Blythe, Robin Kunkel, and Jeff Sica and PDS for assisting in the formatting and display of this manual and its many supporting documents.

Without the utilization and support of institutional resources, this manual would not be possible. The Safety Committee would like to thank the following for their continual support:

- Rich Dugan, Radiation Safety Management
- Bruce Cadwallender, Director SMS
- Jan Lach, Manager SMS
- Brenda Schroeder, SMS Industrial Hygienist
- Candace Friedman, UH Infection Control

In researching the many resources available to the Safety Committee to create this manual, a special word of recognition and thanks is extended to the University of North Carolina Hospitals McLendon Clinical Laboratories Safety Committee for allowing our departmental Safety Committee to utilize a portion of their online safety manual. Their many hours of dedication and commitment to laboratory safety is evident via their comprehensive manual and is a benchmark of excellence that we aspire to meet and hopefully exceed.
