Exclusively from MarketLab

In their search to find a better way to handle anatomical pathology cases, a cross-functional team of pathology and engineering experts from the University of Michigan have created the first and only system that solves the safety and efficiency issues technologists face every day. It has all of the features and none of the drawbacks of current handling methods so adapting it to your process will be simple and effortless.

Notches allow for easy separation of trays and hold elastic bands in place

One-piece, polypropylene construction is strong, durable, and xylene-resistant

Paperwork fits perfectly into tray

Slides, blocks, and paperwork for each case can now be kept in one place

Each tray nests with tray below it which makes stacking and transport easy
