**Pancreatic Endocrine Tumors**

Was the tumor treated pre-operatively?

**Site:** head, body, tail

**Size:** cm

Has it been treated pre-operatively with chemotherapy?

Invasion of common bile duct: **Yes** No

Invasion of duodenum: **Yes** No

Invasion of peripancreatic tissue: **Yes** No

Venous invasion: **Yes** No

Number of positive lymph nodes (includes nodes involved by direct extension from the primary)/ total number of nodes: /

Distant metastases: **Yes** (specify site) **Unknown**

For Whipple resection: Uncinate margin involved (identified by the surgeon): **Yes** No

For distal pancreatectomy: Retroperitoneal resection margin involved: **Yes** No

**pTNM**

**T Stage**

T0 No evidence of primary tumor (mainly for post-treatment tumors)

T1 Tumor limited to the pancreas, 2 cm or less in greatest dimension

T2 Tumor limited to the pancreas, more than 2 cm in greatest dimension

T3 Tumor extends beyond the pancreas but without involvement of the celiac axis or the superior mesenteric artery

T4 Tumors involves the celiac axis or the superior mesenteric artery (this is unresectable, so we will not ever use this code)

**N Stage**

NX Regional lymph nodes cannot be assessed

N0 No regional lymph node metastasis

N1 Regional lymph node metastasis

**M Stage**

M1 Distant metastasis

If not M1, then do not include an M stage.

We cannot determine if there are no distant metastasis, so M0 cannot be used.

(AJCC staging manual, 7th ed.)

PDS template: pancreas (PANC)
