### Provider Team vs. Treatment Team

<table>
<thead>
<tr>
<th>TREATMENT TEAMS</th>
<th>PROVIDER TEAMS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>The Treatment Team</strong> is the list of everyone who is involved in a patient’s care.</td>
<td><strong>Provider Teams</strong> allow the rounding or consult teams to be managed and added to the Treatment Teams of patients.</td>
</tr>
<tr>
<td>The Treatment Team is the equivalent of CareWeb’s Inpatient Care Team.</td>
<td>A Provider Team can be assigned to the patients that team is following.</td>
</tr>
<tr>
<td>Treatment Teams include individuals from many different roles—providers, nurses, pharmacists, medical students, and more.</td>
<td>When members of the Provider Team change, the change can be made in one place and will be applied to all of the patients to which the team is assigned.</td>
</tr>
</tbody>
</table>

Because changes can be made to the Provider Team in one place and apply to multiple patients, using Provider Teams helps keep the Treatment Team up to date so that nurses and others involved in the patients’ care know who to contact.

When a Provider Team is assigned to a patient, the patient will appear on the list of patients for that Provider Team. This can help others find the patients that a team is seeing.

**Note:** You have the option to fill out additional information in your profile under Treatment Team, in the comments section, including your specialty, best phone number to reach you or any other appropriate content.

Add members to the Provider Team

1. Under the **Actions** button, click on **Define Providers Team**.

2. Either type in the **name of the team** or select a team from the drop down list under the magnifying glass.

3. To change team members, click on **Schedule Changes**.
   - Assign roles
   - Set effective dates

**NOTE:** You should only modify team members in the **Schedule Changes** screen. If you modify the team directly, changes will not affect patients for whom the team has already been assigned.
